Torque Specifications

BOLT TORQUE DATA FOR STANDARD NUTS, BOLTS, AND CAPSCREWS.

Tighten all bolts to torques specified in chart unless otherwise noted. Check tightness of bolts periodically, using bolt chart as guide. Replace hardware with same grade bolt.

NOTE: Unless otherwise specified, high-strength Grade 5 hex bolts are used throughout assembly of equipment.

Torque figures indicated are valid for non-greased or non-oiled threads and heads unless otherwise specified. Therefore, do not grease or oil bolts or capscrews unless otherwise specified in this manual. When using locking elements, increase torque values by 5%.

* GRADE or CLASS value for bolts and capscrews are identified by their head markings.

6033 Side Rail Assembly Instructions

1. Prefit the side rails in the pucks of the truck and make sure the handles will lock into place. If handles are too tight or don't lock into place, remove bottom nut #1 from parts breakdown and take handle out of bushing. There will be a couple of washers #12 between handle and bushing that can be removed to adjust the tightness of the handles in the trucks pucks. Reinstall handles and check for fit.
2. Loosely bolt the main Autoslide assembly to the side rails with spacer plates using the 1/2" x 1 3/4" bolts, flat washers, and lock nuts provided in the side rail bolt package at the predetermined height using the bolt pattern guide in below. **NOTE:** On highest setting, use 6 bolts. The 4 along the top row are to fasten to hitch assembly and the bottom 2 are to fasten the side rail brace to side rail to retain locking pins. (1/4" & 3/8" thick spacers are supplied for adjusting the hitch mount width with the bed pockets. You may mix and match the different shim thicknesses for fine tuning the fit).
3. Tighten all bolts.
4. Unlock locking pins and insert the hitch assembly into the base rails and test for fit. If the pins are too narrow to drop in, follow the alignment procedure on page 3.
5. Proceed to base rail install procedure as provided in the base rail installation kit.

IMPORTANT NOTE: Incorrect mounting of the side plates to the main body will result in the incorrect position of the hitch for towing and will not allow the hitch to travel back to its full 14" ability.

IMPORTANT NOTE: Apply a little grease or lubricant to the part of the pins that insert into the base rails to help maintain smooth operation and rotation of pins and to protect from the elements. Turn the pins occasionally to prevent them from seizing.
